

Turning your well-being practices into habits

SMALL, CONSISTENT PRACTICES
CAN CREATE A BIG, LASTING IMPACT.

The Habit Loop

By understanding how habits form and persist, we can take deliberate actions to make our desired behaviors stick. Start by identifying the well-being habit you want to adopt—for example, practicing gratitude—and then apply the three components of the Habit Loop: cues, routines, and rewards.

Watching out for unhelpful recovery tactics

Some tactics may seem helpful but actually enable us to suppress, numb, and avoid our stressors. These tactics don't charge our battery; they might drain it. Examples include throwing yourself into work, having one too many drinks, using meditation or over-exercising to avoid difficult feelings or conversations.

How do you know if you are recovering or suppressing? Ask yourself: does this activity increase my awareness of what stresses me out, or does it feel like I'm avoiding the problem?

Challenging our beliefs

Changing our habits might require that we challenge our beliefs. If you are a perfectionist who likes to be in control of things, it may be hard to admit that you need to delegate tasks to find time for recovery. Opening up about our beliefs can help us understand them better and identify how we can adapt to new habits.

With awareness and intention, we can integrate well-being practices into our lives until they truly become habits.

The more we can do this, the easier it is to stay at the top of the inverted U by automating healthy behaviors and proactively maintaining a productive level of stress.

“

Your first and foremost job as a leader is to take charge of **your own energy** and then help to orchestrate **the energy of those around you.**”

— Peter Drucker

THE POWER OF OTHERS

The importance of role modeling

YOUR ENERGY SHAPES OTHERS.
LEAD BY EXAMPLE.

This quote is true no matter your role on a team. Research shows that our behaviors are contagious. Your choices affect the choices of others around you, whether they realize it or not. Each of us should think about how we can stay at the top of the inverted U and, in so doing, create a mutually reinforcing support network among our colleagues.

Your behavior influences others.

Positive energy creates a healthier, more productive team.

Support each other to stay at the top of your potential.

How to Build Support in Your Surrounding Environment

PRACTICAL STEPS TO CREATE A POSITIVE, SUPPORTIVE, AND HEALTHY ENVIRONMENT THAT LASTS.

01

Celebrate one another

Did your teammate just run their first race? Did another make it to their child's soccer game every weekend this past month? These seemingly small things are important, and our colleagues are more likely to continue to prioritize their well-being if they are actively encouraged. Here are some ideas:

Dedicate time in a standing meeting to celebrate one or more people, or to share something you are grateful for.

Congratulate your teammates when they have accomplished something important.

Send a note of appreciation.

03

Set expectations and boundaries ... and communicate them

Get clear on what you need to be your best self, and share that with others. Then hold yourself accountable! Here are some ideas:

Clearly communicate when you might be stepping away for a bit, signing off for the day, or are unavailable.

Take it a step further and do not respond during those times.

Ask your teammates to challenge you when you are failing to respect your own boundaries.

02

Develop team norms (things that the team does regularly)

Well-being is easier with the support of a group. Here are some ideas:

Give everyone permission to set and enforce their own boundaries.

Dedicate time to discussing personal and collective goals (e.g., hours of sleep, number of workouts, books read).

Create a visual tool to track progress.

Do a daily check-in or check-out, using a messaging tool to share your small wins.

04

Share what is going on, and ask for support

Challenge yourself to be vulnerable and communicate openly, both about what is working and what is not. Here are some ideas:

Send your team ideas or resources that you read about, listen to, or watch.

Take it a step further and start a conversation about what you learned.

Communicate the goals you are working on and ask if anyone has advice or a resource to help.

Key Takeaways

In this module, we covered the following key tools to help you build a more balanced, resilient, and fulfilling life.

01

Assessing your battery

Use the questionnaires to understand the current state of your well-being and create a plan that touches upon all the ingredients — physical, mental & emotional, social, and spiritual.

02

Practicing acceptance

Use this to increase your emotional flexibility by getting curious about your emotions and choosing to let go or address them.

03

Role modeling well-being

Use this to set the standard for your state of well-being, and then communicate and show it to others around you.
