

Relationship and Well-being

BUILDING MEANINGFUL CONNECTIONS
FOR A HEALTHIER AND FULFILLING LIFE

Meaningful
Relationships

Physical and
Mental Well-being

A More Fulfilled
and Balanced Life

Introduction to Relationships & Well-Being

Welcome to the Relationships & Well-Being course!

The amount of stress and challenges humanity faces today is dramatically affecting our well-being. Being able to proactively manage your energy despite challenges will help you have a positive and sustainable experience at work, and in life. Building meaningful connections with others and a healthy team dynamic can further enhance your overall satisfaction and effectiveness.

The purpose of this module is to provide you with tools that you can use to improve your well-being, establish strong relationships with others, and create a safe and productive environment for you and your team.

*"Stronger Relationships.
A Healthier You.
A More Meaningful Life."*

In this course, you will learn how to:

01

Evaluate and improve your well-being

Assess your current state of well-being and take practical steps to improve it across multiple dimensions.

02

Build strong relationships with others

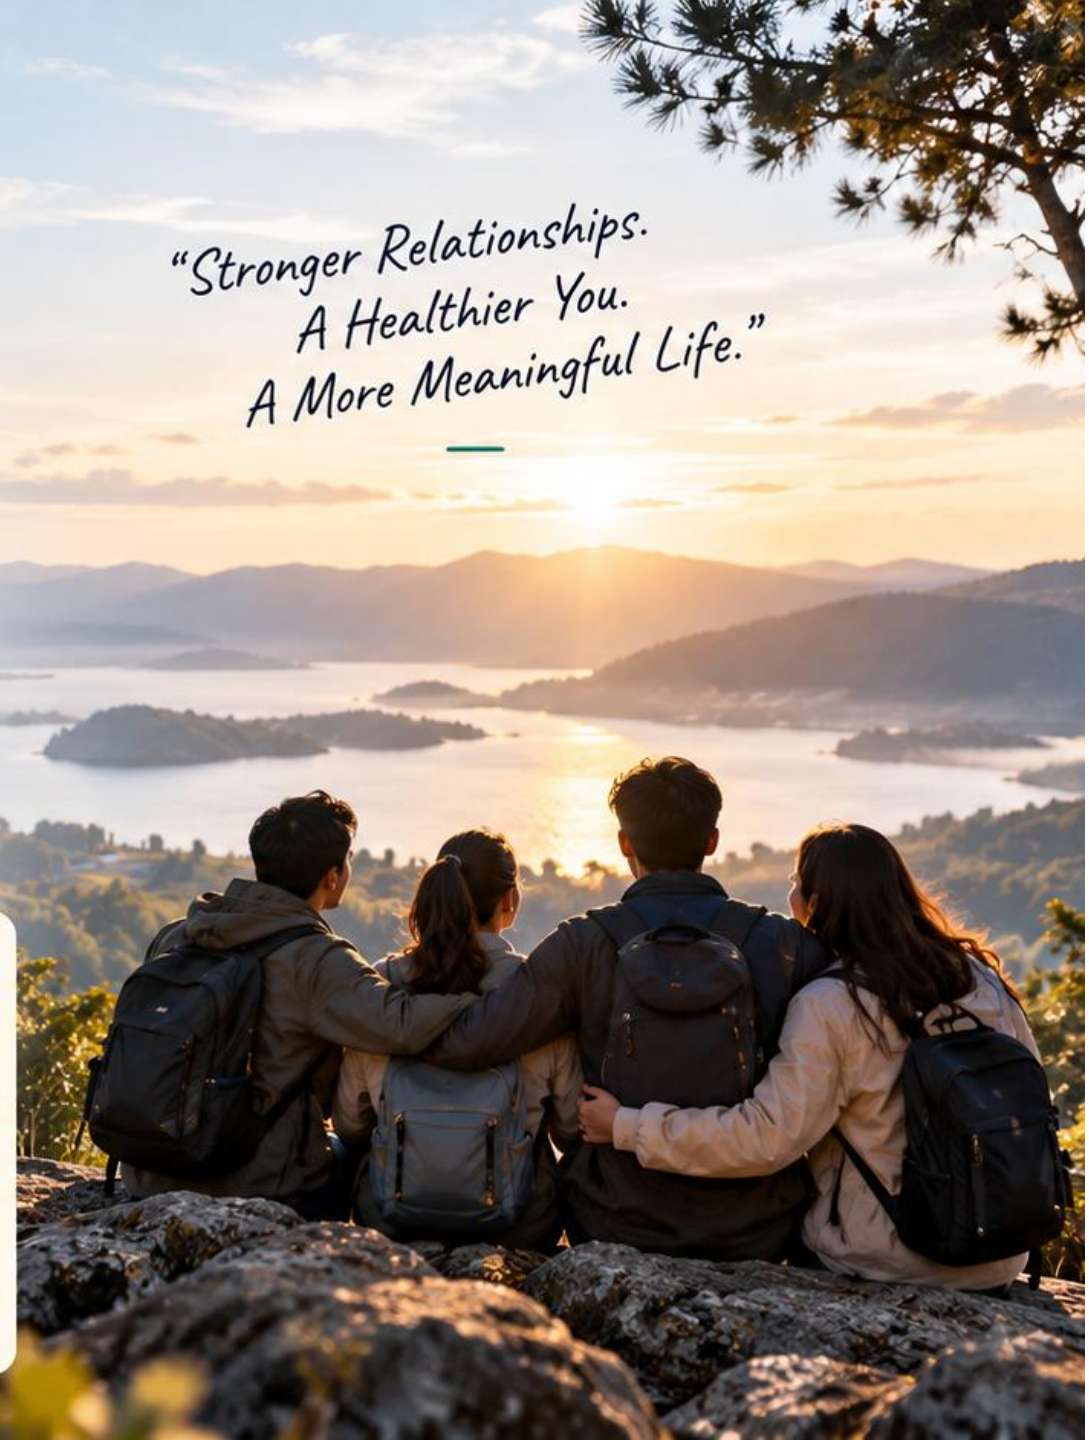

Develop meaningful connections by being attentive, vulnerable, empathetic, and compassionate.

03

Create a safe and productive team environment

Foster a culture where people feel safe to speak up, take risks, and make mistakes.

Why is well-being so important?

Your level of well-being directly impacts your energy, performance, relationships, and overall life satisfaction.

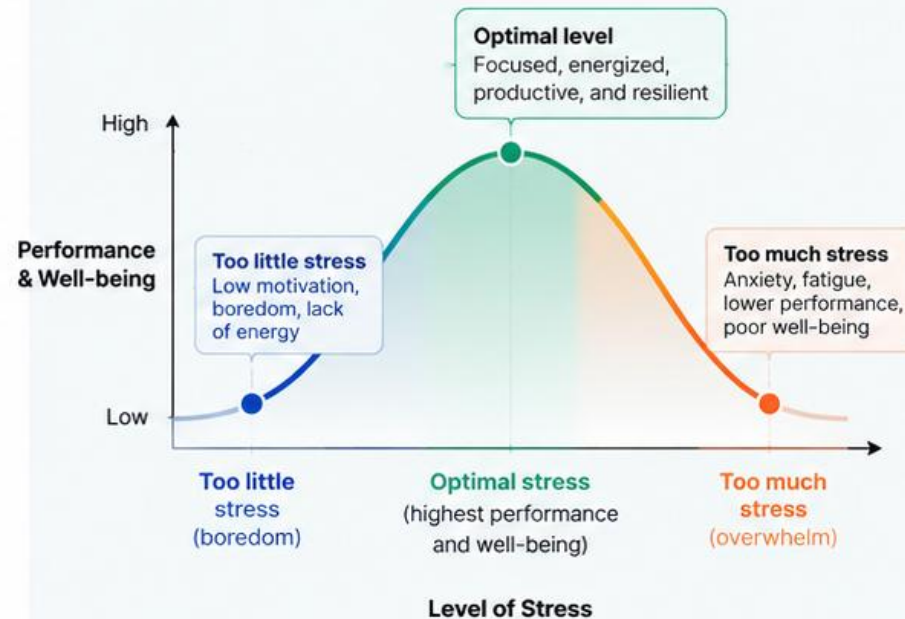

“I am so stressed!”

Whether you recently heard that or said it yourself, the feeling of **too much stress** is a familiar one. Did you also know that there is such a thing as **too little stress**, which also affects your well-being and ability to perform at your best?

The best place to be is to imagine an **upside-down U-shaped curve**, and put yourself at the top of it.

The Stress-Performance Curve

Both too little and too much stress can reduce well-being and performance. The optimal point is at a moderate level of stress.

As you watch the video below, ask yourself:

1

Where am I on this curve right now? How do I feel?

2

Is this a trend for me?
