

How has digital impacted **your** life?

What new app, device, or digital service have you started using?

- 1 How has this product impacted your life? What made you start using this in the first place?
- 2 Write a brief answer to the above questions within the *Forward Learning Workbook*, then answer the question on the right.

What benefits have you gained from using the new app, device, or service?

Review the following statements. Then select all that apply.

It makes my work easier or more efficient

It helps me connect to friends, family, or colleagues

It allows me to get more relevant information to make better decisions

It solves a problem I didn't know I had

Other benefits not mentioned here

Great!

All of these benefits illustrate the value of digital. Going digital isn't just using new technology: it's combining technology with data and new ways of working to make better decisions, automate, connect, and improve our experiences as customers, employees, and members of our communities.

INTRODUCTION

What do we mean by digital?

You know digital is transforming lives at home and at work. In this course, you'll explore what digital is—data, technology, and new ways of working that can help us maximize value.

Data

How do new approaches to collecting and analyzing data help us better understand the people we serve, make better decisions faster, and develop new solutions?

Technology

How do new technologies help accelerate impact and solve problems at work?

Ways of working

How do new ways of working enable us to meet people's needs better and more quickly?

Data

In a connected world, we create mountains of data as we use our devices. Organizations in every sector now rely on the flow and exchange of that data. Advanced analytical techniques can even create new data from patterns in existing information.

We generate data everywhere

Every device, app, and interaction creates data.

Organizations rely on data

Data flows and is exchanged across every sector.

Analytics create new insights

Advanced techniques can uncover patterns and generate new data.

As you watch this video,

pay attention to how creative people and organizations are finding new ways to use data.

Do any of these ways sound familiar to you?

Consumer behavior
Purchase patterns and preferences

Smart cities
Traffic, mobility, and urban planning

Healthcare
Better diagnosis and personalized care

Business decisions
Faster, smarter, more accurate decisions

Sustainability
Monitoring and optimizing resources
